

MEETING REPORT

Team Name: Food Ordering System Project Team

Date of Meeting: 13 March 2026

Start Time: 10:00

End Time: 10:45

Meeting Location: E-012

Moderator: Arjola Sula

Recorder: Arjola Sula

Other Members Present: Xhesika Toska, Arjola Sula, Sofia Cala, Aurelio Hysenaj, Klara Hyrenaj, Erjus Allka

Members Absent: Imerr Meraj

Topics Discussed:

- The team discussed the importance of using Use Case Diagrams and Activity Diagrams in system modeling.
- Each team member presented a different use case, explaining its functionality and purpose within the system.
- For every use case, a corresponding Activity Diagram was presented to illustrate the process flow step by step.
- The discussion highlighted how these diagrams help in better understanding the interaction between users and the system.
- Emphasis was placed on maintaining consistency between functional requirements and the developed diagrams.

Decisions Made

- Each major system functionality will be documented using both a Use Case and a corresponding Activity Diagram.
- All diagrams will follow UML standards and remain clear and easy to understand.
- Consistency across all use cases and activity flows will be ensured.
- Team members will collaborate to review and improve each other's

diagrams.

- A final review will be conducted to ensure completeness and accuracy of all diagrams.

Tasks Assigned:

All team members presented one Use Case along with its corresponding Activity Diagram, contributing to the overall system analysis.

Arjola Sula: Presented the use case “Manage Customer Account”, explaining how users register, log in, update their profile, and manage account settings. The Activity Diagram illustrated the flow of user actions and system responses during account management.

Xhesika Toska: Presented the use case “Restaurant Staff Manages Account and Restaurant Profile Information”, including activities such as updating restaurant details, managing profile information, and maintaining account settings. The Activity Diagram showed the step-by-step process of these operations.

Klara Hysenaj: Presented the use case “Manage User Support Operations”, describing how user issues and support requests are handled within the system. The Activity Diagram represented the workflow from receiving a request to resolving the issue.

Sofia Cala: Presented the use case “Administrator Generates System Reports”, focusing on how administrators access system data, generate reports, and monitor system performance. The Activity Diagram illustrated the sequence of actions involved in report generation.

Aurelio Hysenaj: Presented the use case “Restaurant Staff Manages Menu Items, Categories, and Food Availability”, explaining how menu items are created, updated, categorized, and marked as available or unavailable. The Activity Diagram showed the logical flow of menu management.

Erjus Allka: Presented the use case “Delivery Driver Reports Issues During Delivery”, describing how drivers report problems encountered during delivery, such as delays or customer issues. The Activity Diagram outlined the process of reporting and handling these issues within the system.

Time, Place, and Agenda for Next Meeting:

Next Meeting Date: 08 April 2026

Location: E-012

Agenda:

In this meeting, we discussed the task given for this week. We agreed that next week we will work on and present the State Diagrams for each user role or main system objects, as well as the ERD diagram for the whole system. The focus will be on clearly showing system states, transitions, and relationships between entities.
